Group 43: meeting 6

Opening at: 16:10   Chair: Ceren

Secretary: Mika

Present: everyone except Nivard and Kristin

What did everyone do:

Ceren: added more tests, worked on the client-server connection;

Daan: bit of database stuff (last day);

Sem: worked on GUI, added buttons and made them work;

Merel: added activity class and DTO, added more tests;

Mika: starts to understand what the hell is going on + some documentation

This week:

- By using our branches well, the master stays protected;
- We have some files we don't need anymore:
    - classes/production/OOPP/META-INF;
    - Eclipse files:
        - .project;
        - .classpath;
- Demo2
    - Everything works, we passed the demo;
    - It seemed like he liked the background colour;
    - Tips from the TA:
        - Use famous people for registering;
        - Make the add button a bit more like a button;
- Test coverage:
    - Keep looking to branch coverage;
    - Warnings set as errors is a good thing;

For next week:

- Demo3
    - 4 out of 6 features;
    - Users have friends and can compare their score with them;
    - Score:
        - Normal one: averages for all activities;
        - Classes one: averages for different classes (electric/gas car);
        - Advanced one: using a matrix;

Answers from the TA:

- Does the GUI needs to be a specific size?
    - No, but the applications will be shown on notsogreat beamers, so think about that.
- Name change
    - Old links to "template" should still work;
    - Now our name is Greenify;

end
